

MPB PANEL MOUNTING KITS

Illustrated:-
Foreground - MPB Series 1200 Flowmeters
Background - MPB Series 1750 Flowmeters

GENERAL INFORMATION

Where flowmeters are employed in considerable numbers, or a control panel requires a relatively flat surface, the flowmeter is often rear of panel mounted to obscure the flowmeter body and associated pipework.

MPB Industries Ltd can supply a full range of rear of panel mounting kits which are supplied complete with a polycarbonate bezel, with black rear of bezel screen printed with a clear zone for good scale visibility.

All mounting kits can be supplied for use with, or without, integral flow control valve.

The instrument itself can be securely mounted to the rear of the panel where it can easily be removed for cleaning or maintenance purposes, leaving the bezel untouched on the front of the display panel.
